CAN bus communication

A module answered. Follow the path it used, then identify the branch involved in the complaint.

A response establishes this exchange. It does not clear B's path.

Three things to remember

Map the response. Identify the scan connection, gateway and modules that answer.

Narrow the diagram. Start with the affected modules and the vehicle's actual equipment.

Check the next vehicle again. A familiar symptom does not guarantee the same layout or cause.

Your working notes

Which modules answer, and which do not?

Which path would you identify next, and why?

Source video: Gateway and scan path: 08:00 | Escalade case: 12:00

Lesson and practice: gotech.com/learn/can-bus/communication-and-context/

Educational case study. Use vehicle-specific service information for tests and specifications.
